Cryogenic Shipping Containers

CX & CRX Series

Cryo Express (CX) dry shippers are designed to safely transport a variety of materials at cryogenic temperatures. The unique absorbent material prevents a liquid spill if the unit is tipped over. Storage temperature inside the shipping cavity remains at approximately -190C until the liquid nitrogen evaporates from the absorbent material. The CX Series comply with international regulations applicable to the transport of hazardous goods by road (ADR), rail (RID) and by air (IATA-OACI).

Notes:

1. Evaporation rate and static holding time are nominal. Actual rate may be affected by the nature of the contents, atmospheric conditions, container history, and manufacturing tolerances.
2. Work time is an arbitrary, reference-only value to estimate container performance under the actual operating conditions.
3. Without canisters or racks.
4. CX500 and CXR500 vials are stored in 100 cell boxes.
